

Course Creator AI

The **Course Creator AI** plugin is an advanced tool for Moodle that allows administrators and teachers to generate complete courses and specific activities using Artificial Intelligence.

Overview

The **Course Creator AI** plugin helps teachers build full Moodle courses and standalone activities with the help of Datacurso AI services.

It works together with the **Datacurso AI Provider**, which supplies the license key, credit usage controls, and shared AI context used across the Datacurso plugin suite. Once both plugins are installed, Course Creator AI appears inside Moodle's native course creation form and provides an optional AI-driven assistant to plan, review, and populate course content.

Teachers can define the course intent through a prompt or a syllabus PDF, ask the AI to propose a structured plan, adjust the outline, and finally create the course or individual activities with AI-generated descriptions, instructions, and (optionally) images.

Administrators and instructional designers can rely on Course Creator AI to:

- Accelerate new course creation by transforming prompts or existing syllabi into Moodle-ready content.
- Reuse the same Datacurso context when generating additional activities inside the course.
- Enforce consistent tone, structure, and pedagogical rules through reusable system instructions.
- Keep credit consumption governed by the limits and reports managed from the Datacurso AI Provider.

What does Course Creator AI enable inside Moodle?

After installation, teachers see new AI options embedded in familiar Moodle workflows:

- **AI-assisted course creation**
When creating a new course, the **Datacurso** section lets teachers define

the intent and launch the **Create with AI** modal. The AI plans every section, topic, activity, and resource before populating the course shell automatically.

- **AI-assisted activity creation**

Inside an existing course, the plugin adds an **Add activity or resource with AI** button. It reuses the saved Datacurso context to generate single activities without retyping prompts.

Both flows stay inside Moodle and show real-time progress, so teachers can review the generated content immediately.

How the Datacurso context works

The **Datacurso** section in the course form defines how the AI should interpret each request:

- **Context type** – Choose **Custom prompt** to describe the desired course manually, or **Upload Syllabus (PDF)** to send an existing outline. The chosen context is stored per course.
- **Context details** – Provide the detailed prompt or upload the PDF that contains objectives, units, constraints, and student profile information.
- **System instructions** – Optionally apply a reusable instruction (managed in [Manage system instructions](#)) to enforce tone, structure, required elements, or institutional guidelines.

Once saved, the same context is reused automatically for course planning, plan adjustments, and any AI-generated activities created later.

Additional AI controls available in the form

Teachers can further guide the AI response with two extra options:

- **AI response language** – Select the target language for the generated course and activities. The language preference is stored and reused in every AI interaction for that course.
- **Images for the course** – Decide if the AI should generate images for sections and activities. Because each image consumes additional credits, administrators can keep this disabled by default and only enable it when needed.

These options keep the generated content aligned with institutional branding and accessibility requirements.

Planning, adjustments, and creation flow

The Course Creator AI experience is divided into two main phases:

1. **Plan with AI** – Clicking **Create with AI** opens a modal that shows every planning step (context analysis, outline creation, activity design, etc.). If the proposal needs changes, the **Adjust course planning** option lets teachers send extra instructions and re-run the planning phase.
2. **Accept and create course** – Once the plan looks correct, teachers confirm and the plugin creates the course automatically, displaying progress updates until the new course is ready. The user is then redirected to the fully populated course to make any manual edits.

The same modal is used later when creating standalone activities with AI, so the workflow remains consistent.

Consumption control and governance

All AI text and image generations consume credits from the **Datacurso AI Provider** license key. The provider also enforces the governance features that apply to Course Creator AI:

- **Global credit usage dashboards** inside Moodle reports.
- **Per-plugin rate limits** to control how many credits each user can consume with Course Creator AI within a time window.
- **Per-user credit limits** for custom quotas per teacher or instructional designer.

Because Course Creator AI shares the Datacurso AI Provider backend, it inherits the same visibility, limits, and audit trails documented in the provider section.

Requirements

To run Course Creator AI you need:

- **Moodle 4.5 or later.**
- The **Datacurso AI Provider** plugin installed and licensed (see [Prerequisites](#)).
- Appropriate permissions for teachers to access the course creation form and manage activities.

Without the provider plugin or a valid license key, the AI options will appear but cannot process any requests.

Tutorials and guides

- [Create a course with AI](#) - Detailed walkthrough of the planning and creation flow.
- [Create an activity with AI](#) - Instructions to reuse the saved context inside the course and generate individual activities.
- [Manage system instructions](#) - Configure reusable guidance that every course or activity can inherit.

Pre-requisites

Before installing and configuring the **Course Creator AI**, make sure the following requirements are met.

1. Moodle 4.5 or later
2. Install the Moodle AI provider **DataCurso AI Provider**. Download it for free from https://moodle.org/plugins/aiprovider_datacurso/versions.
3. In the DataCurso AI Provider settings, configure a valid license key as documented at [Getting license keys](#).

WARNING

This plugin will not function unless the **DataCurso AI Provider** plugin is installed and licensed. More information about the DataCurso AI Provider can be found at [Overview](#).

Installation

Installing via uploaded ZIP file

1. Log in to your Moodle site as an admin and go to `Site administration > Plugins > Install plugins`.
2. Upload the ZIP file with the plugin code. You should only be prompted to add extra details if your plugin type is not automatically detected.
3. Check the plugin validation report and finish the installation.

Installing manually

The plugin can be also installed by putting the contents of this directory to

```
{your/moodle/dirroot}/local/coursegen
```

Afterwards, log in to your Moodle site as an admin and go to `Site administration > Notifications` to complete the installation.

Alternatively, you can run

```
php admin/cli/upgrade.php
```

to complete the installation from the command line.

Administrator Guide

Welcome to the **Administrator Guide** for Course Creator AI. This section is specifically designed for Moodle administrators who need to configure and manage the global settings of the plugin.

Contents

- [Manage system instructions](#)

Use the sidebar to explore the specific topics.

Manage system instructions

System instructions let you define reusable guidance that reinforces the selected context (`Syllabus` or `Custom prompt`) when creating a course. They describe how the AI should generate content: tone, structure, level of detail, constraints, and specific rules that must always be respected while producing sections, activities, and resources.

To manage system instructions:

1. Log in to your Moodle site as an admin and go to `Site administration > Plugins > Course Creator AI > Manage system instructions`.

Local plugins

[Manage local plugins](#)

[Course Creator AI](#)

[Manage system instructions](#)

1. Click on `Add new system instruction` to create a new instruction.

2. Fill in the form fields:

- **Name:** Enter a clear name for the system instruction you will reuse across courses.
- **Description:** Provide detailed rules and guidelines the AI must follow when generating course content (e.g. structure of sections and activities, constraints, etc.).

- Click on **Save changes**.

Teacher Guide

Welcome to the **Teacher Guide** for Course Creator AI. This section provides step-by-step instructions for educators to leverage AI for course and activity creation.

Contents

- [Create a course with AI](#)
- [Create an activity with AI](#)

Everything is designed to help you save time and focus on teaching while the AI assists with content structure.

Create a course with AI

Follow these steps to create a new course using the Datacurso AI workflow:

Open the course creation page

- **Path A:** Site administration > Courses > Manage courses and categories and click the **Create new course** button.

- **Path B:** From your **My courses** area, click the **Create course** button.

Fill in basic course details

- Complete standard fields like **Course full name**, **Course short name**, **Course category**, **Course format**, and any other required fields.

[Expand all](#)

Course ID number ⓘ

Configure the Datacurso section

The **Datacurso** section lets you define the context that the AI will use to understand the course you want to create, the language in which it should respond, and whether it should generate images. It is divided into five main configuration areas:

- **1. AI response language**
 - Use the **AI response language** selector to choose the language in which the AI will respond and generate the course content.
 - This value is saved per course and reused across AI interactions (planning, adjusting the plan, and course creation).

• **2. Images for the course**

- Use the **Images for the course** selector to decide whether the AI should generate images for sections, activities and other visual elements of the course.
- By default this is set to **Do not generate images**.
- **Important:** Enabling image generation may drastically increase the number of credits consumed in your Datacurso AI Provider license key, because each generated image uses additional credits.

Create an Activity with AI

Check the Datacurso context

Before using the AI activity creator, confirm that the course already has a **Datacurso context** defined.

If the course **already has a context** (for example, an *Instructional Model* or an *uploaded Syllabus PDF*), the AI will automatically use it to generate the activity.

If the course **does not have a context yet**, you can set it from the course settings:

1. Open the course and click **Edit settings**.
